Personalised Asthma Action Plan

Promote the Astmahub Apps

PROJECT OVERVIEW

STEP 1

Identify every patient on the Asthma register.

STEP 2

Refer all patients to Astmahub and Astmahub for parents apps – and record any positive confirmations with the correct code.

MORE DETAILS

STEP 1 - IDENTIFY YOUR ASTHMA REGISTER

Identify every patient on your Asthma register.

STEP 2 - PROMOTE THE APPS

Using text messages, emails or printed leaflets (linked below) to ensure the population of patients with Asthma on your registers are aware of the Astmahub and Astmahub for parents app. The apps provide patients with a virtual Personalised Asthma Action Plan, as well as loads of really useful advice on staying well, using their inhalers, monitoring their peak flow and symptoms, and knowing what to do when their symptoms deteriorate.

Some practices can ask a patient to respond to the text message, confirming that they have downloaded the app and completed their care plan in the app. If this is possible set up an automatic code to be applied to the notes to confirm that the patient has a personalised asthma action plan:

- Read code: 661N1
- SNOMED code: 810901000000102
